The Hidden tourism

Hidden tourism in Ecuador is present in almost all provinces, due to the fact that there are places little known to people since they are not very popular or they are small places where people do not go very often.

Hidden tourism objective

The objective of hidden tourism is to know places little visited by people so that people reserve a place they want to visit through a web page

Hidden tourism website

The website for hidden tourism is used to make reservations in places that are little known in Ecuador, the system is responsible for reserving on a specific date the place that the user wishes to visit, showing a series of options for restaurants to eat, and activities you can do.

In the same way, a tour guide is assigned to accompany you on your trip and show you the places you are going to visit, all this is shown to the user in a roadmap with all the details

When the user wishes, they can cancel their reservation and delete it, in the same way they can search their reservation to know the details

Finally, within the page there is also information about hidden tourism so that the user can read and in the same way can observe the tables of restaurants, places, among others.
